

DINH XUAN HUY

AI ENGINEER INTERN

📞 0372938403 ✉ d.xuanhuy224@gmail.com 🔗 <https://www.kaggle.com/xuanhuydinh> 🔗 <https://github.com/dinhxuanhuy>

SUMMARY

Proactive Artificial Intelligence student with a strong foundation in Machine Learning and Deep Learning. Published an IEEE international conference paper and recognized for scientific research. Seeking an AI Engineer Internship to gain hands-on industry experience while contributing strong analytical, problem-solving, and research skills.

RESEARCH EXPERIENCE

Research Team Leader – TameMini-GS 10/2024 – 10/2025

Ho Chi Minh City University of Technology and Education (HCMUTE)

- Led a research team developing a resource-efficient 3D Gaussian Splatting framework.
- Coordinated implementation, experiments, and manuscript preparation.
- Published the work at the IEEE IWIS 2025 International Conference.

EDUCATION

Ho Chi Minh City University of Technology and Education 9/2023 - 6/2027 (Expected)

Major: **Artificial Intelligence**

- GPA: **3.6 / 4.0**

VTI academy 4/2025 - 10/2025

Course: **AI/Machine Learning**

- Completed a 6-month intensive training program on Machine Learning applications

CERTIFICATE & AWARDS

TOEIC 860 L&R 8/2023 - Expired

AI & Machine Learning Certificate – VTI Academy 04/2025 – 10/2025

Outstanding Student in Scientific Research Award (IEEE IWIS Conference Publication) 10/2025

Academic Encouragement Scholarship (Merit-based Scholarship) 2023 – 2024

SKILLS

Programming Languages	Python, C++, SQL.
AI & Research Skills	Machine Learning, Deep Learning, Neural Networks, Computer Vision, NLP, Transformer Architectures, Representation Learning, PEFT, 3D Gaussian Splatting.
Frameworks & Libraries	PyTorch, Scikit-learn, Hugging Face Transformers.
Math & Modeling	Linear Algebra, Probability & Statistics, Optimization, Loss Function Design, Model Evaluation, Ablation Studies.
Tools & Engineering	Basic Git, Docker, HuggingFace, Google Colab, Kaggle, VS Code, generative AI.

PROJECTS

GPT-2 From Scratch – Mini ChatGPT-like Interview Assistant 06/2026

- **Summary:** Implemented a small GPT-style language model from scratch using PyTorch and trained it on a CV-based interview QA dataset to better understand Transformer-based language modeling.
- **Technologies:** Python, PyTorch, Transformer, GPT-2, tiktoken, Hugging Face, Streamlit, Docker.
- **Responsibilities Achievements**
 - Built a decoder-only Transformer architecture with token embeddings, positional embeddings, causal self-attention, Layer-Norm, residual connections, and output projection.
 - Implemented autoregressive text generation through next-token prediction.
 - Experimented with decoding strategies such as greedy search, beam search, and temperature sampling to analyze generation behavior.
 - Trained the model on a small interview-style QA dataset generated from my CV and deployed an interactive demo on Hugging Face Spaces.
 - Documented key learning points including Transformer architecture, attention mechanisms, text generation, and the computational cost of training AI models.

- **Project Post:** LinkedIn Post

TameMini-GS – Resource-Efficient 3D Scene Reconstruction

2025 – 2026

- **Summary:** Developed a resource-efficient 3D Gaussian Splatting framework focused on model compression, training acceleration, and high-quality 3D scene reconstruction.
- **Technologies:** Python, PyTorch, CUDA, 3D Gaussian Splatting, Computer Vision, 3D Reconstruction, Optimization.
- **Responsibilities Achievements**
 - Reduced model size by $4.3\times$ while preserving high-quality rendering performance.
 - Improved training speed by $3.1\times$ through efficient culling, densification, and parallel rendering strategies.
 - Conducted experiments to analyze trade-offs between model size, training speed, and reconstruction quality.
 - Led implementation, experiment design, result analysis, and manuscript preparation.
 - Published the work at the **IEEE IWIS 2025 International Conference**.
- **Publication:** IEEE Xplore
